

ECF Saint Too Canaan College

2015-2016

Activity Highlight

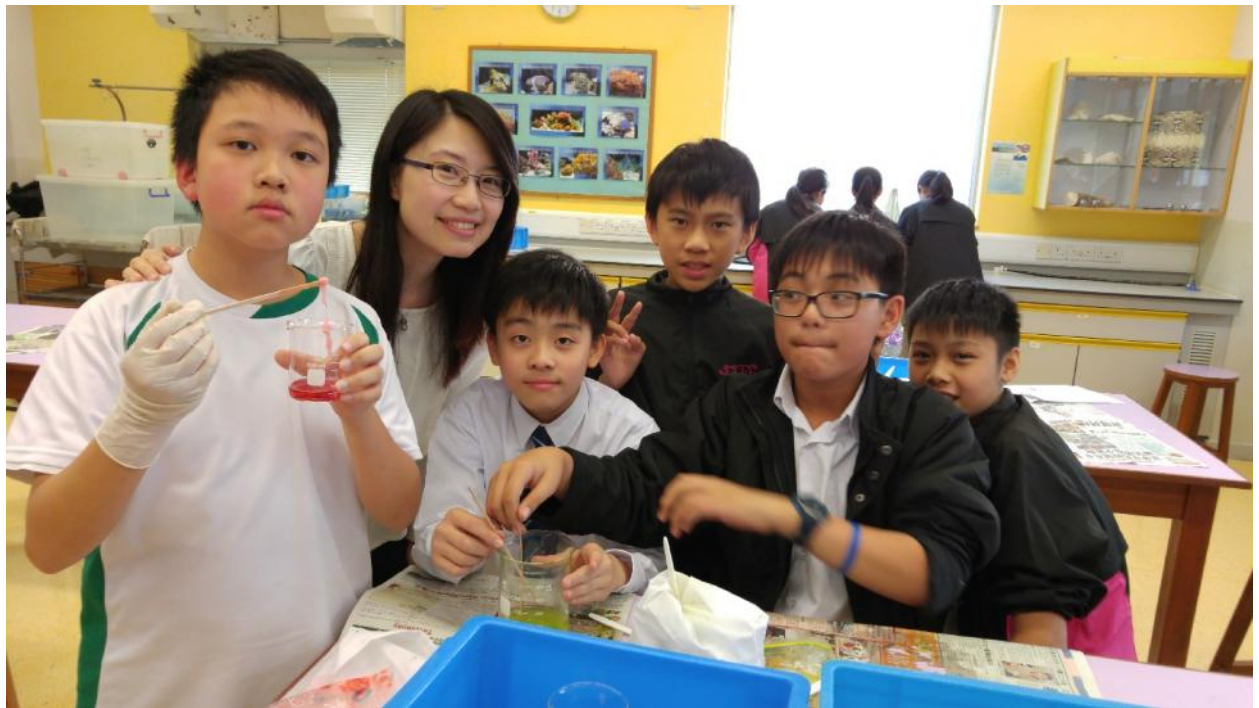

Date: 27/11/2015	Time: 4:15pm- 5:30pm	Venue: Biology Lab
Activity Title: DNA extraction		Participants: 19

Highlights:

Around 20 junior students performed an innovative experiment to extract DNA from common fruits (strawberries and kiwifruits) by just using household materials. After a short briefing about the biological principles, all participants were guided to extract the DNA which they always hear in daily life with the support of our Science Society helper team. Students were curious about what they found and amazed by the ease of extraction simply by using several common items found at home.
