

**ECF Saint Too Canaan College**  
**2015-2016 Activity Highlight**

Date: 8/4/2016	Time: 4:00pm - 5:30pm	Venue: Chemistry Lab
Activity Title: Bath bomb making		Participants: 29

**Highlights:**

Have you ever used a bath bomb? There was an opportunity for our S1- S2 students to make their own bath bomb using common reagents found in laboratory. It involves a very simple chemical reaction. When the bath bomb dissolves in water, it gives out carbon dioxide bubbles. Students were provided with different essential oils (lavender, rose and lemongrass) and artificial colorings to personalize their own bath bombs. Students were very excited to mix the solid ingredient and perform the grinding process using various apparatuses. All of them enjoyed creating their take-home product!
